

License keys

ReqEdit supports online and offline licensing models, we have a licensing platform where you can login and check your license details. We use industrial grade solution for license key management from Thales Sentinel.

License keys

We are publishing all the license keys on the platform. All clients will receive an email with their keys.

You can activate your license directly from the application with "start.exe".

If the activation is not working please follow the instructions in [Online Activation](#) or [Offline activation](#) for activating the software manually.

You can log in to our licensing platform here with the received license key:
<https://license.reqteam.com/ems/customerLogin.html>.

Once logged in you can see the license key details. If you have more than one license keys you need to login with each one separately.

For the eligible keys you can choose between online and offline activation. We recommend to use the offline activation which works on all environments.

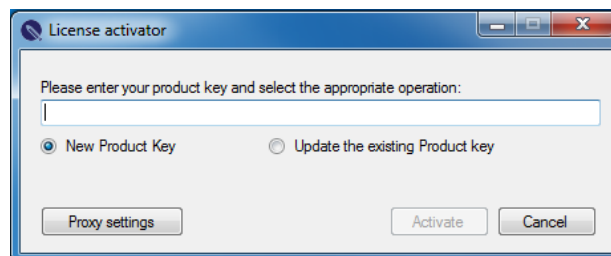

Demo license

To activate the demo license please execute the file „ReqEdit_demo_license_activation.exe“ and press on the „apply update“ button.

If the update is successful, you can start the software. In the menu Help -> License info you can check if the demo license of 30 days has been successfully activated.

Premium license

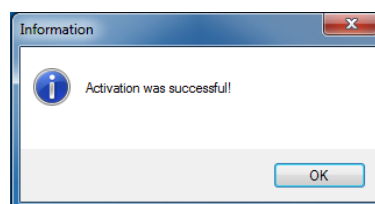

Before running ReqEdit, the license needs to be activated. To do that, you need an internet connection and the license key provided by REQTEAM. The process is automated so the only thing you need to do is to execute „Start.exe“ from your ReqEdit folder and copy your license key in the pop-up window.

If your network requires a proxy for internet connections, you can find proxy settings in the “Proxy Settings” section. More information on proxy settings can be found [here](#).

If you install a new product key, select the corresponding radio button. If you are upgrading or extending your current license, select the „Update“ radio button.

After you click on activate, a progress bar will appear and show you the status of the activation. After the activation finishes you will get a success message and after clicking on OK, the program will start automatically.

After the license installation, the program can be started with „ReqEdit.exe“ or „Start.exe“.

Online Activation

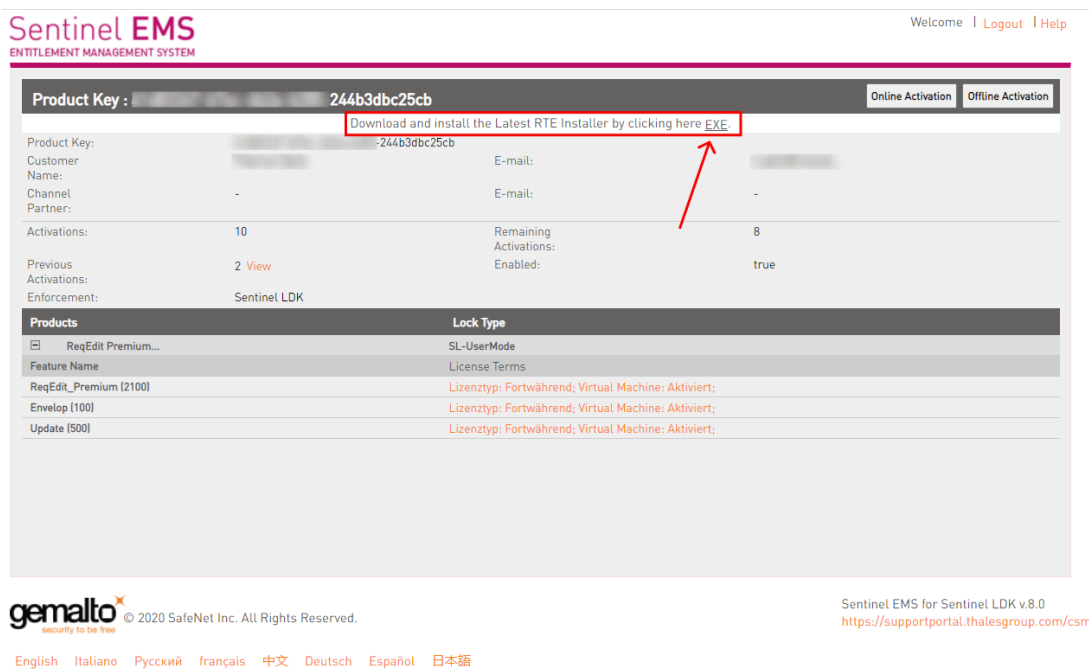

Login with your license key here

<https://license.reqteam.com/ems/customerLogin.html>

Once logged in the license platform, and if your key is not yet activated you can click on “Online Activation”

Download and install haspdinst.exe provided by Thales Sentinel EMS, this tool will do the activation over the internet.

NOTE: the activation tool installation requires Administrative Rights on the Windows machine. It will install a local licensing server that handles your license key activation.

The screenshot shows the Sentinel EMS web interface. At the top, there is a header with the logo and navigation links. Below that, a dark bar displays the Product Key: 244b3dbc25cb. A red box highlights a link that says "Download and install the Latest RTE Installer by clicking here EXE". Below this, there are fields for Customer Name, Channel Partner, and Activations. A table lists products with their lock types and license terms.

Products	Lock Type
ReqEdit Premium...	SL-UserMode
Feature Name	License Terms
ReqEdit_Premium (2100)	Lizenztyp: Fortwährend; Virtual Machine: Aktiviert;
Envelop (100)	Lizenztyp: Fortwährend; Virtual Machine: Aktiviert;
Update (500)	Lizenztyp: Fortwährend; Virtual Machine: Aktiviert;

Once the installation is complete the license activation will be done automatically in the background when starting ReqEdit. If the activation does not work, try the Offline Activation.

You can start ReqEdit with Start.exe or ReqEdit.exe.

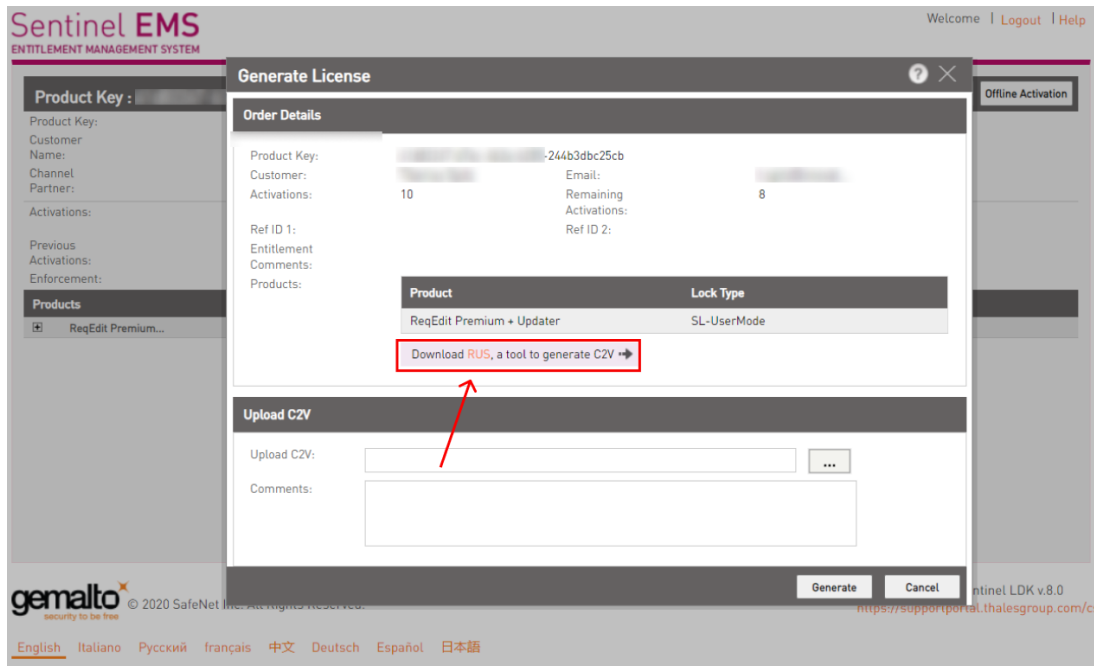

Offline Activation

Login with your license key here

<https://license.reqteam.com/ems/customerLogin.html>

NOTE: Some virus scanners can detect the RUS Tool (RUS_OWOZQ.exe) as potentially dangerous program. Remove from quarantine or ask for permissions to run it.

Once logged in to the licensing platform, please chose Offline Activation, a popup will show up

Follow the steps to activate your application offline:

- Download the **RUS** tool (provided by Thales Sentinel EMS) and run it
- Collect the information necessary for activation "Installation of new protection key"
- Generate the C2V file by pressing the button "Collect Information" and selecting the C2V file extension, **do not close the RUS tool yet**
- Upload this file to the Upload C2V field and press GENERATE, this will produce a V2C file
- Install the V2C file using the **RUS** tool
 - Select tab "Apply License File"
 - Update File and then press "Apply Update"
 - This will activate your key
